Internship Tracker System – Zoho Creator Project Report

1. Project Title

Internship Tracker System – A Digital Platform for Managing Internship Applications and Progress

2. Project Description

The Internship Tracker System is a Zoho Creator application designed to manage student profiles, internship applications, interview rounds, and offer status within a college or institution.

The application allows students to register their profiles and apply for internships, placement coordinators to review and update application status, and administrators to track overall internship results. It uses Deluge scripts for validation, reports for monitoring applications, workflows for notifications, and AI-assisted features for internship recommendations and application summaries.

3. Objectives

- Simplify internship application tracking and management.
- Maintain student profile and company details.
- Prevent duplicate applications for the same company and role.
- Track interview rounds and application status.
- Send automatic notifications about status updates.
- Use AI-assisted suggestions to recommend suitable internships.

4. Forms Used

Form 1: Student Internship Profile

Purpose: To collect student information, skills, and internship preferences.

Field Name	Field Type
Student ID	Auto Number
Student Name	Single Line
Email Address	Email
Department	Dropdown
Year of Study	Dropdown
Skills	Multi-select
Preferred Domain	Dropdown
Internship Mode	Dropdown
Availability	Checkbox
Previous Experience	Multi Line
AI Internship Recommendation	AI-assisted field or integration

Field categories:

- **Basic fields:** Student Name, Email Address, Department, Year of Study.
- **Advanced fields:** Auto Number, Multi-select, Checkbox, Multi Line.

- **AI field:** AI Internship Recommendation, if AI functionality or an external integration is available.

Form 2: Internship Application

Purpose: To record internship applications and track their progress.

Field Name	Field Type
Application ID	Auto Number
Student	Lookup to Student Internship Profile
Company Name	Single Line
Role / Position	Single Line
Domain	Dropdown
Application Date	Date
Interview Round	Dropdown
Application Status	Dropdown
Stipend	Number
Offer Result	Dropdown
AI Application Summary	AI-assisted field or integration

Field categories:

- **Basic fields:** Company Name, Role / Position, Domain, Application Date.
- **Advanced fields:** Auto Number, Lookup, Number, Dropdown.
- **AI field:** AI Application Summary, if AI functionality or an external integration is available.

5. Dataset and Report

Report Name: Internship_Application_Report
Purpose: To display and monitor internship applications and their status.
Report type: List Report
Data source: Internship Application form.

Columns displayed:

- Application ID
- Student
- Company Name
- Role / Position
- Domain
- Application Date
- Interview Round
- Application Status
- Offer Result

Filters:

- Domain
- Application Date
- Application Status

- Department
- Company Name

Benefits:

- View all internship applications in one place.
- Track applied, shortlisted, and selected students.
- Monitor interview rounds and offer results.
- Filter records for specific companies and domains.

6. Three Deluge Scripts

Script 1: Prevent Duplicate Application

Purpose: To prevent the same student from applying to the same company and role more than once.

Implementation note: Use the actual field link names in your form. The following is illustrative; the duplicate search criteria must match the student's lookup ID, company name, and role.

```
existing = Internship_Application[
    Student == input.Student &&
    Company_Name == input.Company_Name &&
    Role_Position == input.Role_Position
];

if(existing.count() > 0)
{
    alert "You have already applied for this internship.";
    cancel submit;
}
```

Script 2: Validate Application Date

Purpose: To prevent entering a future application date.

```
if(input.Application_Date > zoho.currentdate)
{
    alert "Application date cannot be in the future.";
    cancel submit;
}
```

Script 3: Update Application Status

Purpose: To provide a message based on the application status.

```
if(input.Application_Status == "Selected")
{
    info "Congratulations! You have been selected for the internship.";
}
else if(input.Application_Status == "Rejected")
{
    info "Your internship application was not selected.";
}
```

Note: Configure the correct execution event and status choices in Zoho Creator. The third script displays a message; it does not independently update another record.

7. Workflow

Workflow Name: Internship_Status_Notification
Form: Internship Application
Trigger: When a record is created or edited.
Condition: Application Status changes to Shortlisted or Selected.

Actions:

- Send an email notification to the student.
- Include the company name, role, and interview round.
- Provide stipend and offer details when available.
- Notify the placement coordinator if required.

Expected result: Students receive an update when their application status changes.

8. AI Features

AI capabilities depend on the Zoho Creator plan and available integrations.

- **Internship Recommendation:** Suggest suitable internships based on skills and preferred domain.
- **Application Summary:** Summarize application status, interview rounds, and offer results.
- **Skill Gap Analysis:** Identify skills a student may need to improve for a role.
- **Company Suggestions:** Recommend companies based on a student's profile.

These features require an available AI field, supported Creator AI feature, or external AI integration. They are not automatically created by adding a normal form field.

9. Application Workflow

1. **Student Internship Profile** – Enter profile, skills, and preferences
2. **Internship Application** – Select company, role, and date
3. **Deluge Validation** – Check duplicate applications and dates
4. **Coordinator Review** – Shortlist, select, or reject application
5. **Workflow and Reports** – Send notifications and track results

10. Implementation Steps

1. Create a new application in Zoho Creator.
2. Create the Student Internship Profile form.
3. Add the required basic, advanced, and AI-assisted fields.
4. Create the Internship Application form.
5. Configure the student Lookup field and application details.
6. Add and test the three Deluge scripts.
7. Create the Internship_Application_Report list report.
8. Configure the status notification workflow.
9. Test duplicate applications, invalid dates, status changes, and notifications.
10. Set permissions for students and placement coordinators before publishing.

11. Expected Output

- Students can register their profiles and apply for internships.
- Duplicate applications can be prevented.
- Invalid application dates can be rejected.
- Coordinators can view applications and results through reports.
- Status changes can trigger automatic email notifications.
- AI-assisted recommendations and summaries can be added when supported.

12. Future Enhancements

- Resume upload and automatic resume screening.
- Interview scheduling with calendar integration.
- Company dashboards and internship posting by companies.
- Internship completion certificate tracking.
- Feedback and rating for companies.
- AI-based internship and skill recommendations.

13. Conclusion

The Internship Tracker System provides a centralized platform for managing internship applications in a college. By combining forms, Deluge scripts, reports, workflows, and optional AI-assisted features, it reduces manual work and improves application tracking, communication, and result monitoring.
